This is a second slide

- On this slide, we'll test bullet-level animation sequence handling.
 - Here's a nested bullet. Can we reveal it after its parent?
 - Here's a gap in the indentation. How does our renderer cope?
 - What about the bullet point relationship model?
- Now we're back to level 0 indentation.
- Below are some shapes. Will our collision detector flag the overlap with this text boxes' bounding box?

This is our third slide.

- Here's the left column. Below are some transform animations of a shape. Can we start to inject those?

- Here's some text in the right column.
 - Now, here are all of the different bullet types.

 - ✓ All of them

Testing text inside shapes. Can it be done?

Here are all the “Rectangle”
shapes in PowerPoint.

test

Can we see any of them?

- This is a test of the textbox default.
- What the heck is happening?
